

Project Objectives

WEB-BASED BUSINESS MANAGEMENT SYSTEM

1. Project Objectives

1.1 General Objective

To design and develop a web-based Business Management System that enables small and medium-sized businesses to efficiently manage customers, products, suppliers, inventory, sales, payments, and digital receipts, thereby improving operational efficiency and record management.

1.2 Specific Objectives

The project aims to:

- Develop a secure user authentication and authorization system that allows business owners and cashiers to access the system according to their assigned roles.
- Design and implement a customer management module that stores customer information, maintains customer records, and supports quick retrieval of returning customers during sales transactions.
- Develop a product and inventory management module to enable businesses to add, update, categorize, and monitor products while automatically tracking stock levels.
- Implement a supplier management module for recording supplier details and managing supplier-related purchase information.
- Develop a sales processing module that enables cashiers to process sales efficiently while automatically calculating totals, discounts, and updating inventory.
- Implement a purchase order management module to record purchases from suppliers and maintain accurate inventory records.
- Develop an inventory tracking mechanism that records every stock movement, including purchases, sales, returns, adjustments, and damaged items, to provide a complete inventory audit trail.
- Develop a digital receipt generation module capable of generating printable receipts and supporting electronic receipt delivery through email or other digital platforms.
- Generate business reports that provide information on sales, inventory levels, customers, and purchases to support informed decision-making.
- Design a scalable database architecture that supports future enhancements such as multi-branch management, advanced analytics, and customer loyalty programs.
- Develop a responsive web interface that allows business owners and cashiers to access the system from desktops, laptops, tablets, and mobile devices.

Objectives Achieved by the End of the Project

When completed, the system should enable users to:

- ✓ Securely log in based on their assigned roles.
- ✓ Manage products, customers, suppliers, and inventory.
- ✓ Process sales and purchases efficiently.
- ✓ Automatically update stock quantities after inventory transactions.
- ✓ Generate and deliver digital receipts.
- ✓ Produce business reports to support decision-making.
- ✓ Maintain accurate and reliable business records.
- ✓ Provide a scalable foundation for future system enhancements.
